Specifications

General Specifications

System	: Radio Frequency (UHF stereo)
Modulation	: Frequency modulation
Carrier frequency	: 863-865 MHz
Usable area (distance to reach)	: Approx. 100m (328 ft) : using JVC measurements systems
Frequency response	: 30 Hz-15,000 Hz
Distortion	: Less than 4 % (at 1 kHz)

Transmitter (J22121-001)

Power requirements	: DC 9 V (with the exclusive AC adaptor J47126-001(EG Model) /J47127-001(EK Model))
Audio input terminal	: 3.5 mm dia. stereo mini plug
Input impedance	: 25 k Ω
Reference input level	: 300 mV
Dimensions	: 100(W) x 100(D) x 106(H) mm (3-15/16" x 3-15/16" x 4-3/16") (Including antenna)
Mass	: 115 g (4.1 oz) (Without connection cord and AC adaptor)

Headphones (HA-W500RF)

Power requirements	: Rechargeable Ni-Cd battery (1.2 V) x 2
Battery running time	: 20 hours (When charged for 24 hours)
Mass	: 280 g (9.9 oz) (With installed rechargeable Ni-Cd battery x 2)

Provided Accessories

Instructions	x 1
AC adaptor	x 1
Connection cord	x 1 (3.5 mm dia. stereo mini jack- RCA pin plug x 2 : 0.1 m (0.3 ft))
Plug adaptor	x 1 (converts 3.5 mm dia. stereo mini plug to a 6.3 mm dia. standar d stereo phone plug)

* Design and specifications subject to change without notice.

Safety Precautions

1. This design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.)
- Alternate check method
Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground. Measure the AC voltage across the resistor with the AC voltmeter.
Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. voltage measured Any must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

1.Disassembly

■ Transmitter

In case of some problems arise in this transmitter unit,
have to change the transmitter unit itself, due to avoid
the law of radio regulation.

■ Receiver(Headphones)

- 1.Remove the ear pad **1** from the driver unit ass'y (L) **2** and (R) **3**.
- 2.Remove the screw **4** and pull up the driver unit ass'y (L) **2** and (R) **3**.
- 3.At channel L. Remove the screw **5** and insulation washer **6**, and pull up the charge print circuit board **7**.
- 4.Remove the switch knob **8**.
- 5.Remove the screw **9** and remove the battery door **10** from the housing ass'y (L) **12**.
- 6.Remove the battery **11** from the housing ass'y (L) **12**.
- 7.At channel R. Remove the main print circuit board **13** from the housing (R) **14**
- 8.Remove the wire with solder from the charge and main print circuit board **7 13**, then remove the headband ass'y **15**.

2.Schematic diagram

— Use of Circuit Diagram —

Notes:

1. The thick line (—) is the B (+) power supply.
2. This circuit diagram is the reference diagram. Circuits and constants are subject to change without notice for improvement.
3. Values printed in red show the voltages of each section measured by the tester (internal resistance 20 kOhms/V), with the power switch ON.
4. Parts marked with Δ (in the shaded area) are safety parts. When replacing these, be sure to use only the designated parts to ensure safety.
